NINDS: Perinatal Arterial Stroke: A Multi-Site RCT of Intensive Infant Rehabilitation (I-ACQUIRE)  
Perinatal arterial stroke (PAS) includes infants with neonatal arterial ischemic stroke and presumed perinatal arterial stroke and has an estimated incidence of 1 in 1150. The majority will develop hemiparesis, often resulting in lifelong and debilitating disability, including lowered cognition and quality of life. There are no evidence-based forms of rehabilitation designated as standard-of-care for these infants. We propose a Phase III trial to address this lack of evidence-based treatments. The I-ACQUIRE Trial is a rigorous, adequately powered, multi-site randomized controlled trial comparing 2 dosages of a pediatric rehabilitation
